

## CLEAN COPY OF CLAIM 20

20. A portable folding room dividing partition comprising,
- a plurality of articulated panels,
  - vertical hinges connected between the panels,
  - each of the panels including a central core formed from sheet material, a pair of horizontally disposed top and bottom frame members, vertically disposed side frame members along each side of each panel and,
  - at least the vertical frame members having a pair of laterally spaced apart sidewalls and an end wall and having outwardly opening longitudinally extending slots between the end wall and each of the sidewalls,
  - hinges are formed from strips of flexible material connected between the slots on the same side of adjacent panels to allow the partitions to articulate relative to one another and,
  - the panels have wheels and are connected to one another by means of said hinges and to the carrier panels to define said partition,
  - at least one panel at one end of the partition includes,
  - a horizontally disposed laterally extending spread end foot with caster wheels at the ends thereof,
  - the spread end foot is connected to a longitudinally extending bottom frame member by a duplex mounting plate having laterally extending arms that are aligned over the spread end foot and are rigidly connected thereto and a pair of longitudinally extending arms.
